OXYGEN ON TAP

INTRACEUTICALS' HYPERBARIC Oxygen System is a medical-grade machine that combines the benefits of pure therapeutic-grade oxygen and Intraceuticals' signature serums. The system takes oxygen from the surrounding air to then deliver low molecular weight hyaluronic acid and specialised serums to the skin. More effective than a facial and less invasive than a procedure, the Intraceuticals Infusion facilitates the benefits of hyperbaric oxygen, leaving skin lifted, plumped and hydrated. The lightweight yet durable handheld stainless steel infuser provides a controllable stream of therapeutic-grade oxygen that is constantly renewable. Low maintenance and cost-effective to run, it consistently provides instant and accumulative results that speak for themselves. INTRACEUTICALS.COM.AU
